

NAME

pb, aka project-builder.org – builds packages for your projects

DESCRIPTION

pb helps you build various packages directly from your project sources. pbgetparam is a command from the pb project providing the value of the parameter for the running distribution based on the most precise tuple. It is a CLI version of the pb_distro_get function.

SYNOPSIS

pbgetparam [-h][-v][-p project][-d distro-ver-arch] [param|-a]

OPTIONS

-h|--help

Prints this help

-v|--verbose

Print a brief help message and exits.

-d|--distribution

The tuple for which to print the parameter value considered (by default current distribution)

-p|--project project_name

Name of the project you're working on (or use the env variable pb)

-a|--all

Process all configuration parameters

ARGUMENTS

Argument is mandatory and corresponds to the parameter whose value is requested for the related distribution tuple.

WEB SITES

The main Web site of the project is available at <http://www.project-builder.org/>. Bug reports should be filled using the trac instance of the project at <http://trac.project-builder.org/>.

USER MAILING LIST

Cf: <http://www.mondorescue.org/sympa/info/pb-announce> for announces and <http://www.mondorescue.org/sympa/info/pb-devel> for the development of the pb project.

CONFIGURATION FILES

Uses the main `/etc/pb/pb.yml` (or `/usr/local/etc/pb/pb.yml` if installed from files) configuration file to give its answers.

AUTHORS

The Project-Builder.org team <http://trac.project-builder.org/> lead by Bruno Cornec <mailto:bruno@project-builder.org>.

COPYRIGHT

Project-Builder.org is distributed under the GPL v2.0 license described in the file `COPYING` included with the distribution.
